

DECLARATION

I Ashin Siby hereby declare that the project report Online Internal Mark Management System is a record of original work undertaken by me for the award of the degree of Bachelor of Computer Applications, I have completed this project under the guidance of Dr. Anu Thomas Department of Computer Applications.

I also declare that the project has not been submitted for the award of any degree. I hereby confirm the originality of the work.

ACKNOWLEDGMENT

A project is not complete if one fails to acknowledge all who have been instrumental in the successful completion of the project. If words were to be the symbol of undiluted feelings and token of gratitude then let the words play the heralding role of expressing our gratitude.

First of all, I thank “God Almighty” for his immense grace and blessings in my life and at each stage of this project. I express sincere and profound gratitude to our Principal, Dr. Reji Vargheese Mekkadan, St. George’s college Aruvithura, for providing me all the facilities during the period of the project. I extend my gratitude to Dr. Jestin Joy, Head of the Department of Computer Applications, who is a constant source of inspiration and whose advice helped me to complete this project successfully. I express the gratitude to my internal project guide, Dr. Anu Thomas, Assistant Professor, Department of Computer Applications, for her profound guidance for the successful completion of project. With great enthusiasm I express my gratitude to all the faculty members of the Department of Computer Applications for their timely help and support.

Finally, I express my appreciation to all my friends and family members for the moral support and encouragement they have given to complete this project successfully.

Sincerely,

Ashin Siby

ABSTRACT

Today many of the schools and colleges are fully computerised. Computer provides fast and accurate results. The project is “Online Internal Mark Management System”. It is used for the tabulation of internal mark of students. Dealing with numbers is a very tough task, and it is very error prone and also consumes a lot of time.

This project is intended to overcome the drawbacks of existing manual system. This Internal Mark Management System is mainly focused to tabulating marks of students and generating score cards. This system has two logins, first one is for admin/teacher and second one is for user/student. This system makes the communication between student and teacher easier. Students can enter their complaints through this system. Each student has their own accounts with separate username and passwords. Teacher can check and solve their complaints easily.

The main objective of the system is to efficiently evaluate the internal mark of students through a fully automated system not only saves a lot of time but also gives accurate results. The computerization of the system helps to save a lot of time and to get accurate result. We have selected PHP as front end and MySQL server as back end for developing this project. PHP promotes user friendly environment and MySQL satisfies high accuracy in data management.
